

PatientKeeper® Admission Medication Reconciliation™

Beginning Admission Medication Reconciliation

- 1 Select a patient.
- 2 A. Select the **Actions** drop-down and select **Admission Med Rec**, or
B. Select the **Orders** link, and then click the **Adm Med Rec** button.

Reconciling Home Medications for Admission

- 1 Review the list of home medications and select an **Action for Hospitalization** of **Stop**, **Continue**, or **Change** for each home medication.

You may also add a new hospital order by clicking the **Add** button next to **Hospital Orders**.

If prompted, complete the contents of any **Search** or **Order Details** window to add as a new hospital order. If a warning pop-up is triggered, complete any required actions.

- 2 Click the **Inline Alerts** in the **Hospital Orders** column to review the interaction information and determine if changes are needed.

Note: The **Delta** icon signifies that the hospital order has changed from the original home medication.

Warning: You have not reconciled every Medication.

Moderate Interaction: lisinopril 10 mg tablet and potassium chloride ER 20 mEq tablet, extended release(part/cryst) may interact based on the potential interaction between SELECTED ACE INHIBITORS and POTASSIUM SUPPLEMENTS.

- 3 Click **Reconcile and Submit** after selecting an action for **all** home medications unless you are allowed to submit a partial reconciliation. If so, a pop-up displays asking if you want to submit partial reconciliation, click **Submit Partial Med Rec**.

The continued or changed home medications are then submitted as new hospital orders.
